CASH RECEIPTS FROM FARMING IN OHIO

1969

Cash receipts to Ohio farmers from marketings and government payments totaled \$1,357,246,000 in 1969, up less than one percent from a year earlier. A slight decline in receipts from farm marketings was more than offset by a nine percent increase in government payments. Ohio farmers received a record high \$103,424,000 in government payments, with the Feed Grain and Wheat Programs accounting for nearly all of the increase.

Farm marketings during 1969 amounted to \$1,253,822,000. Of this total, cash receipts from the sale of livestock and livestock products accounted for \$769,955,000 or 61.4 percent. Crops accounted for \$483,867,000 or 38.6 percent of the total. Cash receipts from livestock increased nine percent from 1968 due primarily to increased prices, while crop cash receipts were down 13 percent. Smaller marketings of most major crops, along with July flood losses in north central Ohio, contributed to the reduced crop income. Favorable feeding ratios also encouraged feeding rather than cash grain marketings.

Cash receipts from major field crops were below a year earlier. Soybeans showed the largest decline, dropping nearly \$45 million or 26 percent below receipts a year earlier. Receipts from corn and wheat were down six and 19 percent respectively. Vegetable cash receipts were off 14 percent from 1968. The only significant increases from 1968 crop receipts were in fruits and tobacco, up 31 percent and 13 percent respectively, due to larger 1969 productions.

All major livestock groups showed increases from 1968 cash receipts. Receipts from all meat animals increased 15 percent, with receipts from cattle and calves up eight percent, hogs up 22 percent, and sheep and lambs up ten percent. Poultry showed a 14 percent increase, and receipts from all dairy products were two percent above a year earlier.

Dairy remains the largest single source of cash receipts to Ohio farms, accounting for 19.8 percent of the State total income from farm marketings. Cattle and calves retained second place with 16.4 percent of the total, while hogs were a close third place with 15.9 percent. Corn regained fourth place with 10.6 percent of the total. Soybeans, which ranked fourth last year, slipped to a close fifth with 10.1 percent of the total. These five commodities accounted for 72.8 percent or nearly three-fourths of the total cash receipts to Ohio farmers in 1969.

Darke County led all other counties again in 1969 with cash receipts of over \$41.6 million. The next five highest counties - Wayne, Mercer, Fulton, Putnam, and Wood - each topped \$30 million in cash receipts. Leading counties by commodity were: Wayne in dairy products, Fulton in cattle and calves, Clinton in hogs, Darke in both corn and poultry, and Wood in both soybeans and wheat.

Government payments in 1969 totaled \$103,424,000 or eight percent of the total farm cash receipts in Ohio. This was an increase of \$8,712,000 over 1968 government payments, with the Feed Grain and Wheat programs accounting for the increase. Government payments by program were: Feed Grain Program, \$64,579,000; Wheat Program \$26,647,000; Conservation, \$5,176,000; Cropland Adjustment, \$3,397,000; Wool Act, \$1,502,000; Sugar Act, \$1,212,000; Soil Bank, \$895,000; and Milk Indemnity, \$16,000.

PROCEDURE

Estimates of cash receipts by county from farm marketings in Ohio were published initially in 1927 and annually since 1929. These county estimates of cash receipts are published by the Department of Agricultural Economics and Rural Sociology of The Ohio State University and the Ohio Agricultural Research and Development Center in cooperation with the Statistical Reporting Service of the U.S. Department of Agriculture. This bulletin contains the 1969 Ohio county cash receipts estimates, and revised 1968 estimates for the State.

Gross and Net Farm Income data are presented in Table III. The information is available only at the State level, but the relative income situation of the Ohio farmer can be observed over a period of years. It is interesting to compare the net income figures with total cash receipts and realized gross income for the State by years.

Cash Receipts represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and inter-farm sales are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and purchases of feeder animals are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

Current cash receipts estimates for Ohio and other states appear in the USDA's Farm Income Situation--216--Supplement, August, 1970. These estimates are prepared by the Economic Research Service of the U.S. Department of Agriculture from basic data provided by the Statistical Reporting Service, the 1964 Census of Agriculture, and other sources. The State estimates published in this bulletin may differ from previously published estimates due to revisions in marketings, inshipments, inventory numbers, etc., as more complete information becomes available.

Data from milk market administrators provided a basis for allocating receipts of milk from producers at plants operating under the Federal Order to counties. Data from the Animal Health Division of the Agricultural Research Service provided information on the location by county of producers selling milk to dairy plants. The number of producers in each county was used as a basis of breaking down total receipts at plants not under Federal Order to counties. This assumes annual deliveries per producer to each plant would not differ significantly at the county level. Each grade of milk was considered separately in arriving at the county total cash receipts.

As in recent bulletins, the sale of dairy cows and veal calves has been included with the sale of cattle and calves. Poultry cash receipts include income from the sale of eggs, farm chickens, broilers, and turkeys during 1969. Because of the confidential nature of the data, cash receipts from turkey eggs and other poultry are included as other livestock. Included with sheep cash receipts are returns from wool sales as well as income from sale of sheep and lambs.

The commodity group formerly called "Greenhouse and Nursery" was changed by The Economic Research Service to "Horticulture Specialties" this year. Horticulture specialty cash receipts totals are comparable with the former "Greenhouse and Nursery" figures. Cash receipts from the sale of greenhouse vegetables are included with vegetable cash receipts, and not with horticulture specialties. The county vegetable estimates are a combination of field grown vegetables and vegetables grown under glass. For purposes of ranking, potatoes were considered as separate from vegetable cash receipts. Cash receipts from fruit crops are made up of returns from small fruits as well as from tree fruits and nuts.

Two important factors influencing any comparison by counties are the size of the counties and the major source of cash receipts in each county. Table VI presents the average cash receipts per farm and per acre by county. These averages aid in the comparison of counties with similar farming practices better than a comparison of the total cash receipts. The average per farm and per acre is based on the 1964 U.S. Census of Agriculture "number of farms" and acres of "all land in farms" projected to 1969 levels. In some counties the average per acre cash receipts are relatively low because the Census designated acres of "all land in farms" includes a considerable amount of land not cultivated and some not even used for pasture. The 1964 Census defined a farm as any tract operated as a unit of 10 or more acres, if the estimated sales of agricultural products for the year amounted, or normally would amount, to at least \$50; or if less than 10 acres, had sales of agricultural products totaling \$250 or more.

County estimates of cash receipts do not include the value of commodities used on farms. For example, producers may market grain and hay in the form of beef or milk rather than in its original form. By counties the relative importance of some commodities would be different if the value of these commodities used on farms where produced were computed. Figured on a season average price basis for each commodity, the value of selected crops used on farms where produced in 1969 would amount to \$137 million for corn, \$65 million for hay and \$13 million for oats.

This bulletin has been prepared through the efforts of many people. Included are personnel of the Ohio Agricultural Stabilization and Conservation Service, Federal Milk Market Orders operating in Ohio, the Ohio Department of Agriculture, the Ohio Agricultural Research and Development Center and the Agricultural Research Service. Special recognition is due the professional and clerical work done by the staff of the Ohio office of the Statistical Reporting Service, particularly Miss Shirley Zonner and Mr. Kent Hoddick. However the greatest recognition is due to the large number of Ohio farmers and agribusinessmen for their interest and help in providing the basic data used in compiling the information for this bulletin.

TABLE I

CASH RECEIPTS FROM FARM MARKETINGS AND GOVERNMENT PAYMENTS, OHIO, 1930-1969

Year	Farm Marketings				Total Cash Receipts and Government Payments	Percent of All Commodities	
	Livestock and Livestock Products	Crops	Total Livestock and Crops	Livestock and Livestock Products		Crops
